RRI Design Office

Number of delegates: 6
Duration: 5 days
Location: Any suitable training site that has an RRI system installed

Who should attend

The course is designed for experienced design or project staff who have a good working knowledge of signalling principles and who are able to read railway diagrams.

Objectives

On successful completion of the course, delegates would have covered the following:

- Route selection and the PBI circuitry
- Route calling
- Points circuits
- Signal circuits
- Route holding, locking and releasing

Learning approach

80% classroom based with 20% practical appreciation of the RRI system from the panel to equipment and return indications.
Theory assessment to verify delegate's understanding and knowledge.

Pre-requisites

Delegates must have a sound knowledge of the design office and be able to read signalling diagrams.
